Project 2 Individual Write-up

1) **Questions about the Project**
   a. Zachary McNulty (Partner Mahir Bathija)
   b. I thought the project was pretty neat. I like how the projects are building on each other, helping us focus on understanding how to write code as well as how to put to use the code we have already written. Implementing the iterator for the chainedHashDictionary was a cool challenge. I liked the extra layer of complexity the nested dictionaries created, and how this provided an opportunity for us to think deeply about how to make our code efficient.
   c. The ChainHashSet felt like it was a bit out of place. There was barely any code we needed to write for it, and I am not quite sure what it helped me learn (besides a bit about error handling). Maybe we are using it in a future project that I am just not aware of yet.
2) **Questions about your partner**
   a. I thought pair programming was alright. It was kind of difficult to find time to meet, but since this project was shorter that was not too big of a hassle. I think explaining some concepts to my partner helped me understand the topics better and helped me think more deeply about what could go wrong in my code.
   b. I thought the partnership was fine. Pair programming seemed to fix some of the issues we were having with communication. I just wish he would commit his changes more often.
